Weekly Individual Report Unit 2 Week 5

Austin Hall

UFID: 90207943

Time Dedicated to the Project

This week I spent 10-12 hours working on the project. I dedicated an entire day to working on the project. I was out of town last weekend so I had some catching up to do so I worked until I had something my group members could work from. There will probably be another hour or two spent on the presentation, but that isn't for another three days from now.

Contribution to Project Development Process

My contribution to the project's development this week involved attending this week's team meeting where we discussed our individual roles and responsibilities and working on the front-end aspect of the project.

First I created some wireframes of what our front-end UI will look like so I had something to work towards while implementing the front end. I created wireframes for the homepage, user homepage, user/account information page, session creation page, and the video player page.

After creating those is implemented the session creation page so my group members can work further on the back-end and storage components of the application. I also created a placeholder homepage where we can click a button to go to the session creation page. This was made so I could practice/figure out of page routing in React works.

Demonstration of Applied Knowledge

This week I spent a lot of time searching the internet for how to implement the different components of the webpage. This was a beginning step to becoming more acquainted with how the React framework functions. I used the wireframes I created to guide me during implementation.

Reflection

This week's work was important and felt like the first big step from planning a website to actually building something. Last week I had one functionality built on a standard template, but now I have something that is closer to the functionality we need. Working on the wireframes was very helpful and gave me something to work towards. Last week I was just

focused on getting a button to work but this week I had to actually think about what I wanted this website to look like which was more fun than I thought it would be.
